TURBO IIHD: Pre-Screen Cleaning

For best performance, remove and clean prescreen on your TURBO IIHD engine air precleaner annually or as needed based on the severity of your environment.

Remove Nut

Wash PreScreen

Then reinstall prescreen and nut *(we recommend using a little Loctite)*.

One of the benefits of a TURBO IIHD PreCleaner is that the Prescreen is cleanable and replaceable if needed. No other PreCleaner is as easy.
